

## Worksheet 5. Application Summary

This worksheet will be posted on the web to notify the public of requests for critical use exemptions beyond the 2005 phase out for methyl bromide. Therefore, this worksheet cannot be claimed as CBI.

1. Consortium Name: California Strawberry Nursery Association

2. Location: California and Oregon

3. Crop: strawberry nursery plants

Pounds of Methyl

4. Bromide Requested 2007 303,056 lbs.

Acres Treated with

5. Methyl Bromide 2007 1,290 Acres

6. If methyl bromide is requested for additional years, reason for request:

2006	<u>977,600</u>	<u>lbs.</u>	Area Treated	<u>4,160</u>	<u>Acres</u>
2007	<u>303,056</u>	<u>lbs.</u>	Area Treated	<u>1,290</u>	<u>Acres</u>
2008	<u>303,056</u>	<u>lbs.</u>	Area Treated	<u>1,290</u>	<u>Acres</u>

Place an "X" in the column(s) labeled "Not Technically Feasible" and/or "Not Economically Feasible" where appropriate. Use the "Reasons" column to describe why the potential alternative is not feasible.

Potential Alternatives	Not Technically Feasible	Not Economically Feasible	Reasons
Telone	X	X	Reduces yield, does not have the same pathogen, nematode and weed control as MeBr/Pic. Cannot control the pathogens and pests deeply enough in the soil profile. Can have phytotoxic effect. Can degrade rapidly in some soils
Chloropicrin	X	X	Does not have the same pathogen, nematode and weed control as MeBr/Pic. Cannot control the pathogens and pests deeply enough in the soil profile.
Telone + Metam Sodium	X	X	Reduces yield, does not have the same pathogen, nematode and weed control as MeBr/Pic. Cannot control the pathogens and pests deeply enough in the soil profile. Can have phytotoxic effect. Can degrade rapidly in some soils
Telone+Chloropicrin	X	X	Reduces yield, does not have the same pathogen, nematode and weed control as MeBr/Pic. Cannot control the pathogens and pests deeply enough in the soil profile. Can have phytotoxic effect. Can degrade rapidly in some soils.
Telone+Chloropicrin+Metam	X	X	Reduces yield, does not have the same pathogen, nematode and weed control as MeBr/Pic. Cannot control the pathogens and pests deeply enough in the soil profile. Can have phytotoxic effect. Can degrade rapidly in some soils
